Front-End Developer

Bohdan Zahlynskyi

Great dedication to the things I undertake has always led me to great trust from employers. I was trusted from setting up the work of the department to creating instructions for employees and conducting training. My super strength lies in super dedication to a cause that interests me. And the most interesting thing for me has always been programming and now I am looking for a team to join in which I can open up and show myself as a high-quality developer. I am well versed in HTML and CSS, as well as JavaScript, I'm passionate about creating applications using React. And I am a person with light energy with whom you will never have a conflict, only a smile on your face :)

Experience

Contact group agent | DHL Express Ukraine

February 2018 - June 2019 | Kyiv, Ukraine

Consult clients about custom clearance of their parcels. Being in touch with couriers to control delivery after custom clearance.

Custom Broker | DHL Express Ukraine

July 2019 - March 2022 | Kyiv, Ukraine

Provide custom operations for transportation parcels under custom control to other cities. Being in touch with agencies to check information about custom clearance of parcels which have end point of delivery in my regions.

Safety Engineer | Interukrtrans

August 2018 - March 2022 | Knyazhychi, Ukraine

Development of instructions on safety rules at the enterprise for employees. Conducting briefings. Creation of a documentary base on labor protection at the enterprise. On 11.2021, the enterprise successfully passed the inspection by the government service.

Education

University "Ukraine"

Management, Bachelor

September 2012 - July 2018 | Kyiv, Ukraine

Courses

Front-End Mentoring Course | FoxmindEd

December 2022 - May 2023

Before starting the course, I studied on my own. I learned **Python**, **Django**, **HTML** and **CSS**. Therefore, mentoring immediately suited me. There was almost no theory in this course, the course is structured according to a scheme - I receive a task, find the relevant documentation myself, complete the task and push it to **git**, my mentor does a code review and opens access to the next task if everything is correct. During the course, I practiced using **vanilla JavaScript**, created an **online store**, a **weather forecast widget** with the OpenWeatherMap API, and a **country search site** with the REST Countries API with the ability to change the modes to dark and light. I used **LocalStorage** for data storage in my projects and **SCSS** as CSS preprocessor. Learned how to create applications using **React**, used **React Redux**, **React-hook-form**, and the last project was built on **React Router**. In this project, **work with the server** is simulated using the JSONPlaceholder API, many features of React Router are used, and several-level **nested routes** are created. *It was the greatest pleasure to create this project! :) You can find the code of my projects on my GitHub.*
